2. The S3 High Tech Farming Partnership (S3HTFP)
3. Activities
4. Interregional Projects
5. The proposed collaborative model
6. Benefits

1. The S3 Agrifood Platform

- ▶ Initiative of the European Commission DG REGIO started in 2016 (Kick off event in Florence) to thematically connect European Regions through their Research and Innovation Smart Specialization Strategies (RIS3) - <https://s3platform.jrc.ec.europa.eu/agri-food>
- ▶ **5 active partnerships:**
 - ▶ Consumer Involvement (Ostergötland / Regio FOOD Valley)
 - ▶ **High Tech Farming (Toscana)**
 - ▶ Nutritional Ingredients (Wallonia)
 - ▶ Smart sensors for agri-food (Flanders)
 - ▶ Traceability & Big Data (Andalusia and Emilia Romagna)
- ▶ **Overall aims:**
 - ▶ Support Regions in developing interregional synergies to increase the impact of R&I expenditure and promote Interregional Innovation Investments
 - ▶ Promote Integrated European Value-Chains

2. The S3 High Tech Farming Partnership

Focus

New and High technologies relevant for farming practices (sensing, data acquisition/management, automation/robotics, including ancillary activities such as maintenance & repairing, training and on-farm demo activities)

Involved Regions (including observers)

Flanders, Weser-Ems, Central Macedonia, Western Macedonia, Galicia, Extremadura, South Ostrobothnia, Pays De la Loire, Bretagne, Toscana, Marche, Umbria, Veneto, Emilia-Romagna, Friuli Venezia-Giulia, PA Bolzano, Basilicata, North East Romania, East Central Sweden, Northern Netherlands, Gelderland, Noord Holland, Zuid Holland, North-Brabant, Limburg, Northern Ireland, Centro, Eastern Slovenia

and Countries

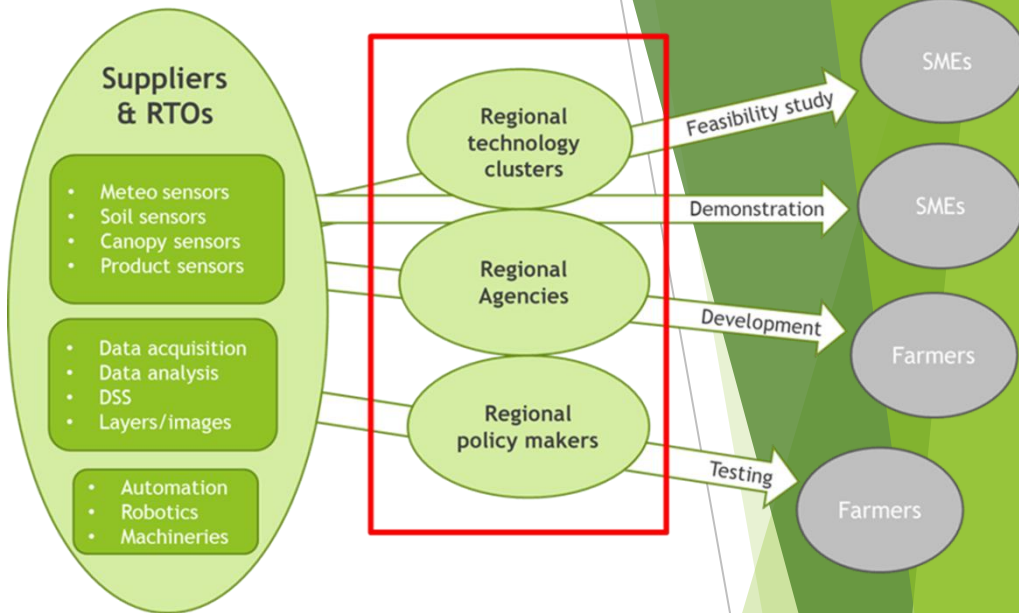

Luxembourg, Norway, Estonia and Slovenia

Objectives

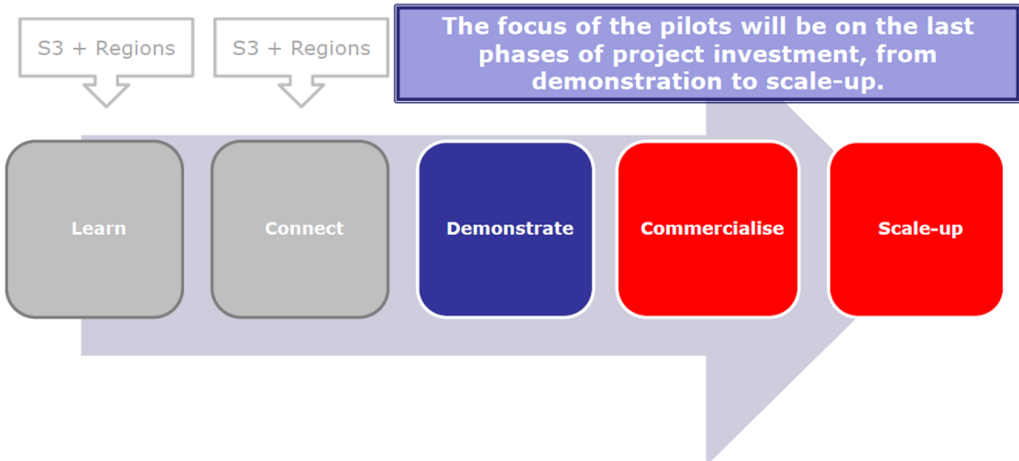

- Improving projects impact
- Reducing gaps in funding and/or knowledge
- Allowing a better management and better marketing of new technologies
- Enabling farmers to use/master technologies

3. Activities

A place for **Regions and actors of their Innovation Ecosystems** to share, promote and connect

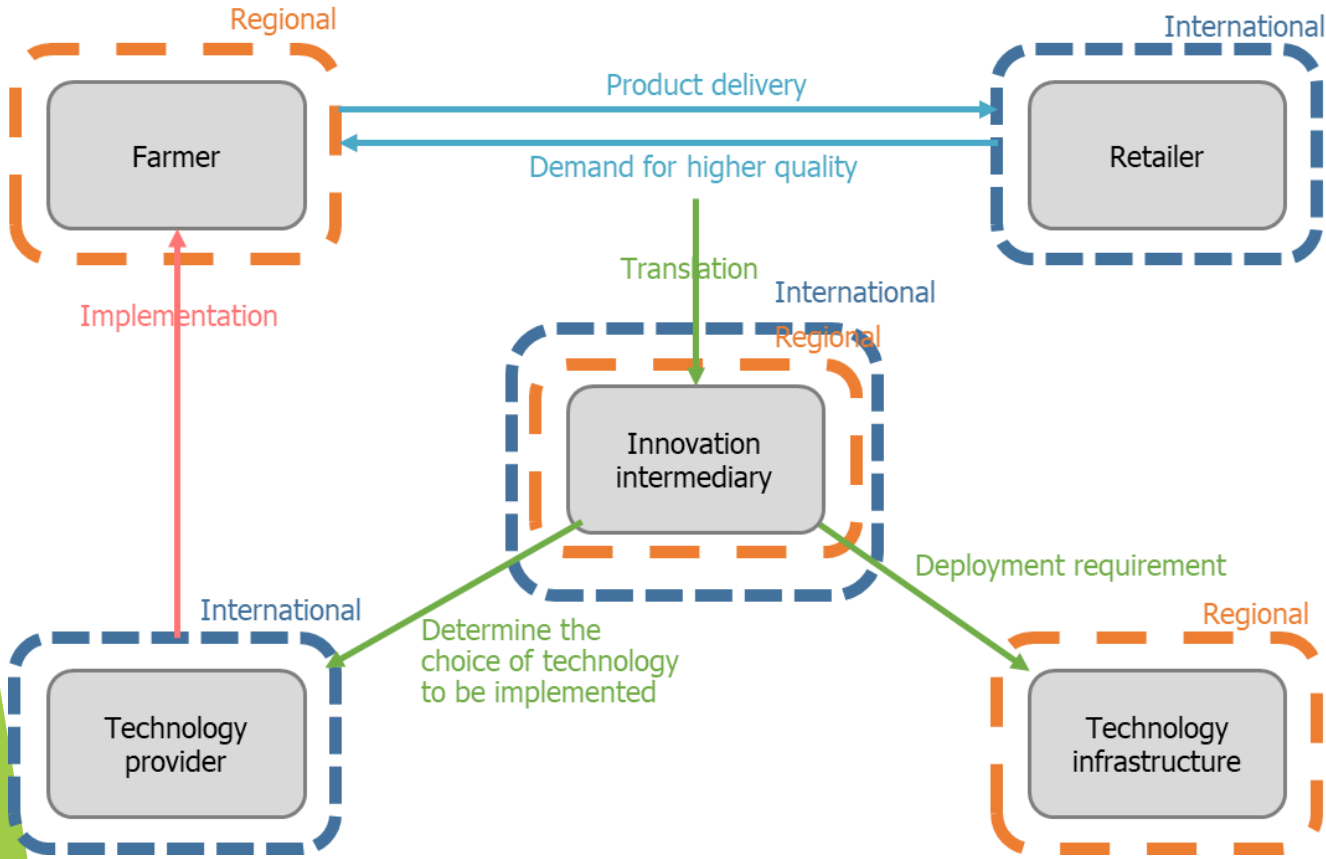

Pilot Projects: strategic interregional investment projects

A place for innovators to expand, integrate and partnering at EU level

4. Interregional Projects

FreshFruit
Development of a new service for determining the quality of grape

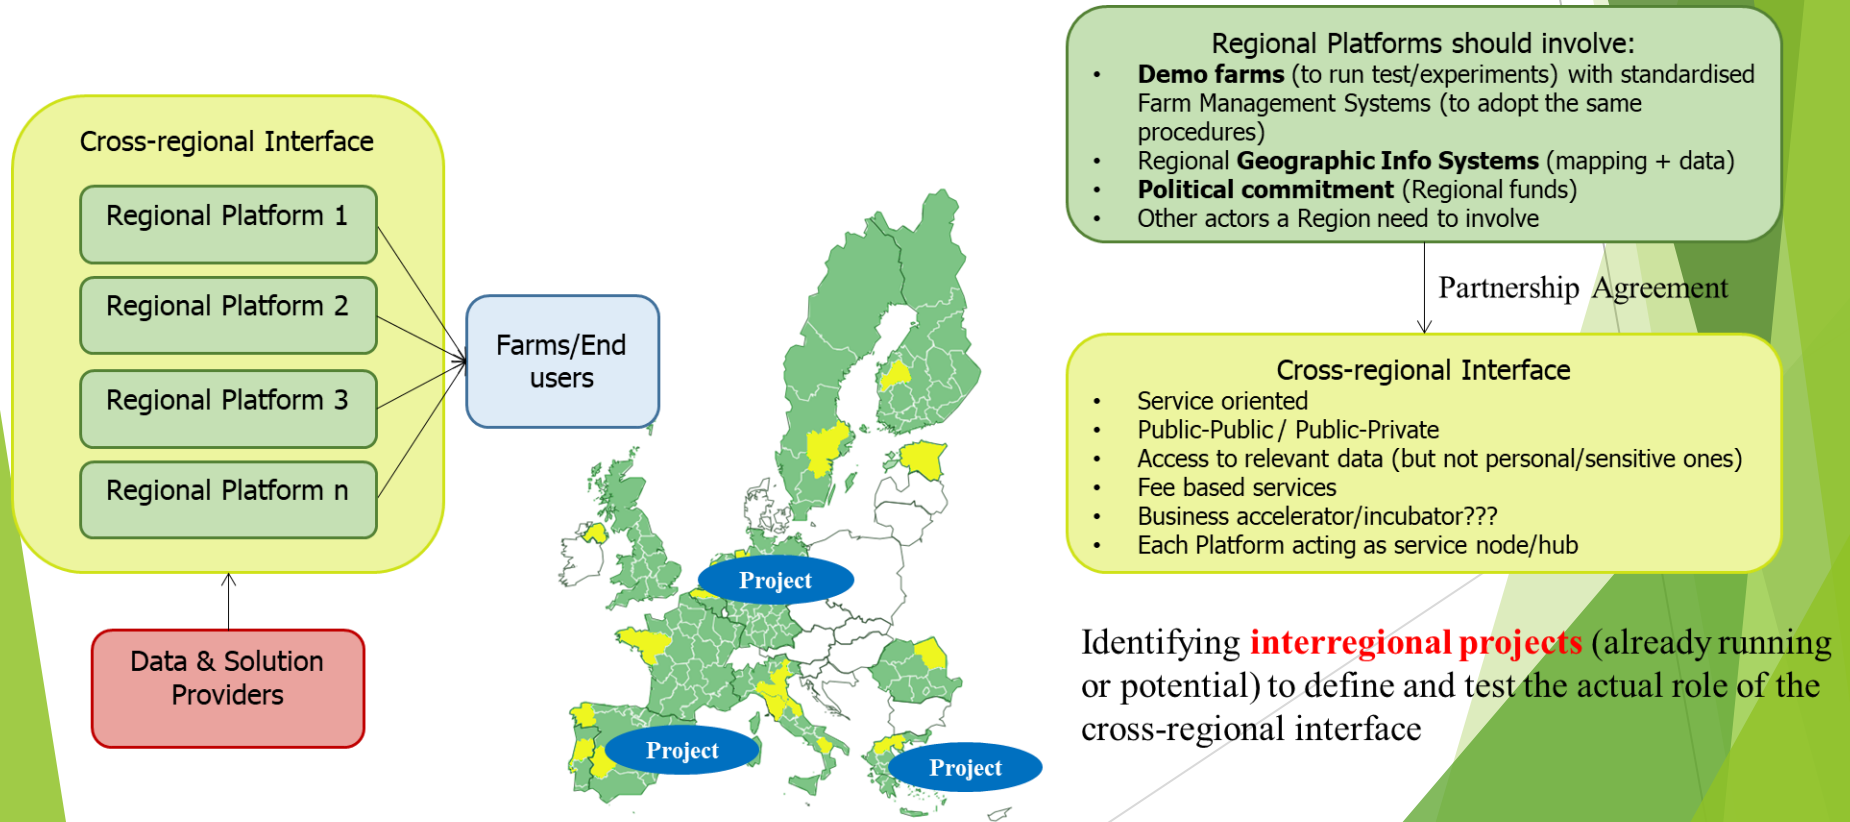

PODUR
Development of a new service for improving air quality in intensive poultry production systems

5. The proposed collaborative model

- Effectively connect Regional Innovation Ecosystems
- Providing timely and effective services to a variety of stakeholders (quadruple helix)
- Aligning with relevant European stakeholders and initiatives
- Maintaining a regional (decentralised) approach

6. Benefits

- ▶ Increase the awareness of regional actors in the agrifood sectors (particularly SMEs and Farmers) of existing innovations and their potential
- ▶ Answer the demand for more dynamic interconnections at European level (Knowledge transfer accros borders), particularly from RTOs and Innovation brokers
- ▶ Providing a clear «reward» to Public Administrations when engaging in interregional collaborations
- ▶ Avoiding Many R&I projects at local scale are doing similar (if not exact same) things.
- ▶ Valorization of the role of Regional «Innovation intermediaries» and of demonstration activities in actual productive systems (DEMO Farms)
- ▶ Facilitate synergies among different funding tools (EU, National, Regional)

Thank you for your attention

Regione Toscana

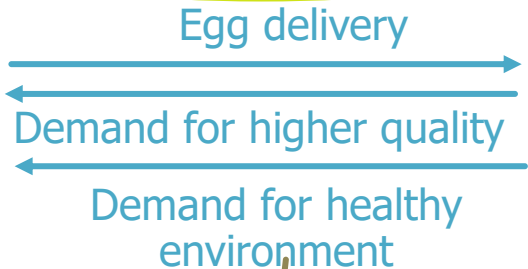

3. Activities

The PODUR case in East Netherlands

Increase of €0.007 per egg
X a total of 10 billion eggs
per year = **€70 million**

Farmers in East Netherlands

Retailer 

Government 

Poultry farmer: 25% risk of lung problems (compared to ~4%)

Implementation

Determine the choice of technology to be implemented

Translation

Poultry Expertise Centre 

Determine requirement

Producers of fine dust reducing systems:

- FreshLightAgri
- Serutech
- StaticAir
- SmitsAgro

~€6 million with 25% of poultry producers (€0,5 investment cost per hen)

Producers of monitoring equipment:

- Stalmeesters (NL)
- Faromatics (ES)
- Copeeks (FR)
